

## Infozech to Showcase Control-Led Telecom Infrastructure Operations at MWC Barcelona 2026 as part of the India Pavilion

**Barcelona, Spain | February 2026** – Across the telecom infrastructure sector, growth has delivered size - but also fragmentation. Field operations, energy, assets, leases, vendors, teams, systems, and AI initiatives increasingly operate in silos. Decision-making slows, margins become harder to defend, and execution depends more on individuals than on structure.

This silent erosion of operational control is emerging as one of the biggest risks facing tower companies and infrastructure owners today. As portfolios scale across thousands of sites and multiple partners, a lack of operational coherence creates hidden risk, margin leakage, and governance gaps that traditional growth strategies fail to address. .

Infozech's presence at **MWC Barcelona 2026** is anchored in this reality. Rather than showcasing incremental tools or isolated technologies, the company is focused on a bigger question confronting infrastructure leaders: **How to retain operational command as complexity accelerates.** Meet the team at Hall 5 | Stand 5A81 | Pod 18.

With more than two decades of telecom domain expertise and experience supporting large-scale infrastructure operations globally, Infozech works closely with infrastructure owners who recognize that future competitiveness will be defined not just by expansion - but by discipline, predictability, and control at scale.

At MWC Barcelona 2026, Infozech will engage with CXOs and industry leaders who are rethinking the fundamentals of telecom infrastructure operations in an era where growth without structure is no longer an option.

## About Infozech

Infozech helps telecom infrastructure owners scale without losing control. By bringing the fragmented operations onto a single operational backbone, we enable clear visibility, predictable outcomes, and disciplined execution. The result is operations that don't just grow bigger but become more resilient, more controlled, and more profitable. Today, our solutions support 300,000+ tower sites, manage 52M+ liters of fuel annually, deliver 18%+ energy efficiency gains, and process \$3.1B+ worth of bills across multiple geographies, delivering real-time operational visibility and efficiency gains.
